

Whisperx OVERVIEW

WORKFLOW (Windows):

(0) Download Interview Audio file(s) onto lab computer

(1) Move files you want to transcribe into desktop folder 'AUDIOS' (*ensure the only files present in this folder are the current audios you want to transcribe*)

(2) Right-click on the TRANSCRIPTION desktop folder > click 'open in terminal'

(3) Tell python to build virtual environment called whisperx-env (python -m venv whisperx-env)

(4) Activate venv (.\\whisperx-env\\Scripts\\activate)

- (4.1) IF ERROR MESSAGE THROWN: call execution policy bypass command (Set-ExecutionPolicy -ExecutionPolicy Bypass -Scope Process);
- (4.2) respond Y
- (4.3) Try activating venv again (.\\whisperx-env\\Scripts\\activate)
 - N.B. !!! If you get an error *after* trying to call execution policy bypass command:
 - Exit terminal
 - Click windows start icon in bottom dock of screen
 - Search 'windows powershell' or 'powershell'
 - RIGHT CLICK on terminal/powershell, and click 'run as administrator'
 - Now retry steps 4-5 (call python to build venv, then activate venv)

(5) Once inside venv (**whisperx-env**), run transcription program

- 2 options:
 - (5.1) Auto transcription of all files in AUDIOS folder, via **transcribe-queue.ps1**
 - Right-click on the TRANSCRIPTION desktop folder > click 'open in terminal'
 - Run **transcribe-queue.ps1**

```
(whisperx-env) PS C:\Users\user\folder\Desktop\TRANSCRIPTION>
.\transcribe-queue.ps1
```

```
>>>> Transcribing:
```

OR

- (5.2) Manual, individual entry (slower/tedious)

```
(whisperx-env) PS C:\Users\user\folder\Desktop\TRANSCRIPTION>
whisperx --diarize "filepath.m4a" --model medium.en --output_dir
"C:\Users\user\folder\Desktop\TRANSCRIPTION" --language en --hf
YOUR_HUGGING_FACE_TOKEN --compute_type int8 --print_progress
True --min_speakers 1 --max_speakers 8
```

(6) Once transcriptions have finished, run srt2txt_v2.py on the transcribed .srt file(s)

- o (6.1) Right-click on the TRANSCRIPTION desktop folder > click 'open in terminal'
- o (6.2) Run srt2txt_v2.py on file(s)
 - Copy filepath of desired .srt
- o (6.3) Paste filepath after -i
 - PS PS C:\Users\user\folder\Desktop\TRANSCRIPTION> python srt2txt_v2.py -i "filepath.srt" -o newfilename.txt

(7) Open .txt file(s), copy text and open new docx on OneDrive—paste in text

Done!

WORKFLOW (Mac):

(0) DOWNLOAD whisperX FOR MAC

(0.1) Unzip folder and place on desktop

(1) IN GLOBAL TERMINAL (command + [space], search terminal)

Installing python 3.10 and whisperx repo

- (1.1) Update homebrew
 - brew update
- (1.2) Install python3.10
 - brew install [python@3.10](#)
- (1.3) Download whisperx git repo, move .zip to users folder and open

(2) NAVIGATE TO WHISPERX TERMINAL

- (2.1) Move from global terminal to whisperX directory within whisperx repo folder
 - cd whisperX

(3) SETTING UP whisperx

- (3.1) Use python3.10 to install .
 - pip3.10 install .
- REMEMBER: specify compute type to int8 and language to english for whisperx when running a function
 - whisperx input.mp3 --compute_type int8 --language en

(4) RUNNING whisperx

- (4) whisperx audiofilename.filetype --model modelname --output_dir desiredirectory --language en --diarize --max_speakers 5 --hf YOUR_HUGGING_FACE_TOKEN
- (6) Clean diarized transcript:
 - o (6.1) ## Download srt2txt_v2.py from GitHub
 - o (6.2) ## Move srt2txt_v2.py into whisperX folder (where all the interview audios are located)
 - o (6.3) ## Navigate to relevant directory
 - cd WhisperXMac-master
 - cd whisperX
 - o (6.4) ## Download necessary package for srt2tx_v2t.py (attrbox)
 - pip3.10 attrbox
 - o (6.5) ## Run srt2txt_v2.py on input file to return transcript .txt with appended diarization (output file can be found within whisperX folder)
 - python3.10 srt2txt_v2.py -i INPUT.filetype -o P#_Diarized-Cleaned_transcript.txt
